REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The independent claims 1, 7, and 15 contain the limitations, taking claim 7 as exemplary, "...restore two or more registers of the first set of register with data contained in the second set of registers over more than one clock cycle and at a first peak power consumption level...although the control unit has the capability of restoring two or more registers of the first set of registers with data contained in the second set of register in one clock cycle and would do so at a second peak power level that is higher than the first peak power level." Most prior art searched and found have taught restoring registers in a single cycle or over more than one cycle in separate devices, but had no motivation to combine the two. The prior art that did teach the possibility of restoring registers in a single cycle or over more than one cycle did so for reasons unrelated to the power consumption, as recited in the independent claims. Prior art searched and found with regard to power consumption mostly focused on elongating the clock cycle to decrease power consumption, so the process would still be executed over one clock cycle. The clock cycle would just be longer. The prior art searched and found did not discuss reducing power consumption by executing a process over many clock cycles, let alone restore a register file, as claimed in the current invention.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
